

Canadian Standards Association Z341 – 2026 Edition Storage of hydrocarbons in underground formations One-Day Course

Date: Tuesday, June 9, 2026
Location: Ramada Inn, Churchill C
817 Exeter Road, London, ON
Time: 9:00am – 4:00pm

Lunch provided
Course fee
\$320 + HST per person = \$361.60

This one-day workshop provides an overview of CSA Z341-2026, *Storage of hydrocarbons in underground formations*. An overview is provided of the standard's development, structure, and its safety and environmental objectives. The course introduces cavern and reservoir storage systems and outlines requirements for geological evaluation; drilling; completion; conversion; operation; maintenance; testing; workovers; and final abandonment of storage facilities. This training is intended for operators, engineers, and service providers involved in hydrocarbon storage in salt caverns and natural gas storage in reservoirs.

Participants will receive a link in advance to access a personalized electronic copy of the Z341 standard. They may print a copy or bring a laptop to follow along during the course. A short knowledge check will be used to ensure participants are familiar with how to locate information within the standard. Guest speakers may also present local geology, an overview of storage operations, and operational experiences. Participants will receive a Certificate of Attendance. At this time, we are unable to confirm whether training to qualify as a Class IV Examiner will be offered.

The course fee includes training materials, lunch, and refreshment breaks.
